

List of Management companies different Building

The building management (in Dutch or French it is called: syndic) is performed by a specified company, voted by the different landlords. The building management deals with the maintenance and problem solving for all items in relation with the common parts. For example, cleaning of hallway, maintenance of elevators and common garden. All works on the building, but not inside the private apartment. In some buildings with a common heating system, also the syndic is in charge of the maintenance and repair of this system.

In the following table all the projects of Skyline Services are listed with their building management company. Further down the contact details can be found.
